

Stepwise enables EV fast charging to be added to any home, no matter your panel capacity

The power to charge your EV is already in your electric panel. Stepwise Tap provides a boost to your panel so you can do more with less.

HOW DOES IT WORK?

Stepwise Tap is a smart device that manages the power draw of your EV charger. When the home's energy usage goes up, the Tap automatically dials down your charger a little bit so you can use your dryer or AC without worrying about blowing a fuse.

Plus, monitor your energy usage to identify ways you could save on your electricity bill.

HOW DOES IT BENEFIT ME?

Adding new electric appliances often means your panel can't handle the extra load – and a panel upgrade costs \$3,000–\$6,000 or more and takes time and hassle. With Stepwise, you can skip the upgrade entirely.

**"We thought a charger installation would cost around \$1,200, but multiple quotes came in higher than \$5,400. Using Stepwise literally saved us thousands."
Bradley (RI homeowner)**

\$3-\$6K savings
vs a panel upgrade

Quicker installation time.
No utility delays

Monitor and see your home's energy usage

Get peace of mind
